Investment Strategy

To achieve the stated objectives, the Investment Committee (IRC) may invest the Class in large-to-mid-capitalization common shares and equities with both low systematic risk and higher expected returns through capital appreciation, dividend income, or a combination of both. The IRC may also invest the Class in exchange traded funds, convertible securities and/or various option strategies to gain exposure across geographic regions and sectors. To optimize the Class portfolio for current market conditions, the IRC may change sector and geographic allocations, as well as tactical approach and investment style. Tactically, the IRC may sell covered call options on securities held directly in the Class portfolio or that can be acquired through various derivative strategies, buy puts to hedge against downside market movements, write cash-secured puts to acquire shares, or buy calls as a stock replacement strategy. The Class may also utilize leverage to a maximum of 20% in aggregate (at the time of incurring leverage) of the portfolio's asset value.
