Investment Strategy

To achieve the stated objectives, the portfolio manager follows a bottom-up growth investment style, using fundamental analysis to evaluate a company's growth potential, financial condition and management. As part of this evaluation, the portfolio manager looks for companies that have above-average earnings and/or revenue growth, display key growth characteristics relative to their own history, industry or overall market, and can sustain their competitive position. The portfolio manager may also use ETFs to provide exposure to world capital markets.

Investment Guidelines

The asset allocation of the Class is 70% to 100% equities versus 30% to 0% cash, with a minimum of 20 and maximum of 40 total holdings. The Class: is permitted to hold up to 20% of the market value of the portfolio in companies with market-capitalizations below \$500 million at the time of purchase; must have a minimum weight of 10% in equities of companies that are located in Canada and the United States as defined by country of risk¹; and is not permitted to borrow to gain leverage. Derivatives use is limited to Warrants, Rights and ADRs/GDRs only.

¹According to the International Organization for Standardization (ISO) country code of the issuer's country of risk. Methodology consists of four factors listed in order of importance: management location, country of primary listing, country of revenue and reporting currency of the issuer. Management location is defined by country of domicile unless location of such key players as Chief Executive Officer (CEO), Chief Financial Officer (CFO), Chief Operating Officer (COO), and/or General Counsel is proven to be otherwise.

Who can purchase the pool?

Pools may be purchased by licensed Portfolio Managers and accredited investors only.

Liquidity

The Class is available for withdrawal and is not subject to any deferred sales charges. Transactions in the Class occur only when the net asset value (NAV) is calculated at the close of every Wednesday and last business day of each month and quarter.

Suitability and Risk Profile

Financial markets can be risky over short periods. Longer term investors benefit from time, which tempers the effects of market volatility. A longer time horizon reduces the chances of losing money and enhances the odds of earning a return close to the longterm average.
