Investment Strategy

To achieve the stated objectives, prospective companies with market capitalizations in excess of CDN \$10 billion are evaluated using traditional qualitative measures like quality of management and industry leadership, as well as quantitative measures such as dividend growth and yield, earnings growth, earnings stability and cash low growth.

The Class will typically invest in 5 to 10 large-cap liquid securities selected from listed North American common shares or shares convertible into common stock. The Class may also purchase long-term call options and / or sell cash secured put options to acquire the underlying constituent securities. The Share Class may from time to time sell (write) covered calls against the common shares or sell index calls on the broader market, to provide limited downside protection and generate tax advantaged cash flow. The Share Class may also purchase protective puts on the constituent common shares or index puts on the broader market, to hedge against down turns in the market.

The Class may from time to time utilize leverage to a maximum of 20% in aggregate (at the time of incurring leverage) of the portfolio’s asset value to increase the exposure to the common shares and / or to meet weekly or month-end redemptions.

Who can purchase the pool?

Pools may be purchased by licensed Portfolio Managers and accredited investors only.

Liquidity

The Class is available for withdrawal and is not subject to any deferred sales charges. Transactions in the Class occur only when the net asset value (NAV) is calculated at the close of every Wednesday and last business day of each month and quarter.

Suitability and Risk Profile

Financial markets can be risky over short periods. Longer term investors benefit from time, which tempers the effects of market volatility. A longer time horizon reduces the chances of losing money and enhances the odds of earning a return close to the longterm average.
